Strategic context | Retail Media has long been a known potential opportunity with an unresolved strategic posture for NIQ

Corporate gameboard
from NIQ strategy
workshop in Boston.

September 24, 2021

Key messages

Context

- The Retail Media market is a large, fast-growing profit pool—market is ~\$50B today across retailers' audiences, ad inventory, & support tooling & data partners; tooling market is \$8-10B; expected to be ~\$12-14B by 2030
- Retail Media is growing pillar of strategic importance for retailers where NIQ has some assets and capabilities (panel, POS, data management, emerging media) that may allow them to play a role in supporting both retailers and CPGs
- The NIQ team has requested a rapid “scan” of the Retail Media market to assess potential opportunities for entry

Approach

- Over ~4 weeks, we scanned the retail media market, identified a broad set of opportunity spaces for NIQ (~10) that we evaluated against multi-factor criteria and narrowed down to 3 “viable paths” for NIQ to consider going forward
- Each path has a recommended posture given its profile and market dynamics

Viable paths

- **Measurement – Continue to explore bilaterally**
 - Opportunity: Cross-channel/cross-retailer measurement to give “credit” for sales outside platform/store; and standard onsite incrementality
 - Market is small with limited point solutions vended today; retailer feedback is negative; however trends (increased non-endemic, role of RMNs as media players) suggests strong future need, NIQ has strong right to win and bilateral conversations with retailers are promising
- **Audience Creation and Enrichment – Opportunistically pursue with limited investment**
 - Opportunity: Leverage existing 1p data sources and audience capabilities to build and sell audiences and enrich audience data
 - Market is large but crowded with scale players and limited attractive assets to purchase; limited right to win (some data but not comparable to others); however, with limited marginal cost beneficial to sell data / provide service where possible; suggest limited investment
- **Planning & activation tools (e.g., Skai) – Deprioritize & monitor**
 - Opportunity: build or purchase a planning tool to gain access to CPGs and retailers as “wedge” opportunity in retail media and potential coop for retailers
 - Clear path to buy into \$100M+ and feedback is relatively positive on asset; however NIQ has limited right to win in SaaS and tool does not provide other benefits, assets or capabilities (e.g., data, measurement, etc.)

Viable paths assessment | Measurement opportunities are most compelling strategically, however retailer willingness to pay is currently limited

Legend		High		Medium/high		Medium		Medium/low		Low		Measurement & Reporting				Audience & Orchestration				Media Activation				
		Criteria										Cross RMN measurement platform (Halo)				Onsite incrementality testing		Creation of 1P audiences		Enrichment of audiences		Retail media planning & optimization tool		
Capture the opportunity	Size of market opportunity (TAM)		~\$60-80M in vended point solution; potential to grow to \$500M-\$1B+ over next 5 years										TAM of ~\$3-4B				TAM of ~\$3-4B				~\$6-7B (Activation)			
	Competitive intensity		Low; Nascent market				Low; Unvended, mostly in-house capabilities				Med-High: Several scale players				Med-High: Several scale players				High: Multiple large providers					
Market needs & willingness to pay	Scale retailer	Value	Don't want to compare				In-house capabilities				Limited applicability				Well-served				Valuable but satisfied					
		WTP	Not interested				Not interested				Not interested				Not very interested				N/A – CPG pays					
	Mid-market retailers	Value	Hard to attribute sales beyond own store/ site				Difficult to calculate				Limited offsite spend				Enrichment not key				Valuable but satisfied					
		WTP	Not critical pain point				Prefer to build in-house				Too costly				Too costly				N/A – CPG pays					
	CPG	Value	Highly values comparison cross-retailer				Prefer trusted 3P vendors				Majority of reach through scale retailers				Allow more precise targeting				Current tooling sufficient					
		WTP	High willingness to pay				Willing to pay premium for standardized 3P				N/A – retailer pays				Willing to pay premium				Not willing to pay more					
	Criticality		Critical to evaluate RMNs				Critical campaign metric				Critical process				Some enrichment req.				CPG efficiency gain					
NIQ “value add”	Strategic advantage / parenting advantage		Household panel data & POS for triang.				POS/ contextual for triangulation				Experience as data aggregator				Current media audiences in RMN context				No adtech capabilities					
Near-term actionability	NIQ mkt. opp.		~\$100M+										<\$20M				<\$50M				~\$100M+			
	Time to value		24+ months										12-24+ months				6-24+ months				6-12 months			
	Buy/ build/ partner		Build										Buy / Build				Buy / Build				Buy			
Recommendation			Continue to explore bilaterally										Opportunistically pursue										Monitor	

Limited today but market dynamics shifting as RMNs become scale media players

A G E N D A

Summary output

Select appendix (*full compendium in separate materials*)

Retail Media 101 (1 of 2)

Key fact

- “Retail media” is all media controlled or brokered by a retailer, including search and display. Retail media networks (“RMNs”) are the infrastructure that support this media and are specific to a given retailer
- The Retail Media ad market is all dollars that are spent on “ad inventory & retailer-owned audiences”. **The Retail Media tooling market is the subset of third party dollars that support the market** (e.g., data enrichment, planning tools, analytics, etc.)
- Retail Media participants include both **scale players** with mature “RMNs” (e.g., AMZ, WMT, etc.) and **mid-market players** with less scale RMNs (e.g., smaller grocers, specialty)
- RMNs can include both “**onsite**” inventory (e.g., within their own .com or own store) and “**offsite**” inventory (e.g., facilitating ads outside of their own site)
- RMNs can sell inventory to both “**endemic**” advertisers (e.g., CPGs that sell products on their site) and “**non-endemic**” advertisers (e.g., financial services provider that wants to advertise to the audience on retailer.com)

Why it matters

- *TAM definition*
- *TAM definition*
- Scale players are **more advanced, do more in-house**, are more protective of data and have more leverage in the market. Mid-market RMNs have fewer capabilities and more needs, pain points
- Increase in “offsite” inventory means that **retailers are becoming broad media players with more pressure to show ROAS/incrementality**
- Increase in “non-endemic” means **retailers are becoming broad media players with more pressure to show ROAS/incrementality**

Retail Media 101 (2 of 2)

Key fact

- Retail media “Audiences” include (1) 1st party deterministic audiences (sold by retailers) and (2) Look-alike modelled audiences; within retail media third party “tooling” either provides additional data for enrichment or tech/ tooling to support audience creation and enrichment
- “Planning and activation” of retail media includes 4 key players— DSPs, ad exchanges, SSPs (optional), and planning tools (optional)
- Measurement includes both “ROAS” (return on ad spend) and “incrementality” which measures the additional sales directly attributable to RM (vs. what would have happened regardless of the campaign)
- Measurement can include “onsite” measurement (e.g., retailer.com), “offsite” measurement (3P channels like social, CTV), and cross-platform measurement (e.g., purchase at another retailer)

Why it matters

- NIQ could participate as a creator of aggregated 1P deterministic audiences for mid-scale retailers using their capabilities as a data aggregator or as a provider of enrichment data for 1P retailer audiences using their consumer panel and shopper behavior/ psychographic data
- Skai and competitors are not DSPs, but are “nice to have” planning tools that help deploy media, leveraging DSPs
- Incrementality is a difficult metric to measure, and methodologies differ across RMNs making it difficult to compare; particularly challenging when measuring cross-platform (e.g., sales in Target from WMT Connect ad)
- Retailers feel confident in their ability to measure onsite and within their own stores and are not looking for a 3P point solution here. However, the biggest potential gap is ability to attribute purchases at other stores (cross-platform) where NIQ can offer a solution as an independent 3P with visibility across retailers using their panel and POS data

Retail media is the highest growth channel within the broader media market

/ PRELIMINARY

Retail media growth outpaces tradition & digital

Note: Forecasts only available through 2027
Source: Moffett-Nathanson

Traditional, digital, and retail media 101

Traditional media

Linear TV, AM/FM radio, print and OOH bought largely via upfront or IO-based deals with fixed placements and limited in-flight optimization; **declining** but **still powerful for top-of-funnel reach** and brand building

Digital media

Ad inventory across search, social, display and CTV, often bought with a high degree of automation (i.e., programmatic) with self-serve tools and continuous optimization using data & analytics; still gaining share from traditional after years of sustained growth

Retail media

WHAT: Retailers selling ad inventory on their owned surfaces (e.g., on website, in stores) to brands and helping brands better target relevant audiences offsite (e.g., on social media, open web search) with their proprietary 1P shopper data

WHY: 1P data becoming increasingly valuable with cookie deprecation and closed-loop sales attribution / ROAS measurement being attractive to advertisers

HOW: Retailers building “media networks” with robust tech stacks to enable orchestration, activation, and measurement of campaigns for advertisers

Strategic options prioritization | Over the past 4 weeks of work, we have narrowed down our list of strategic options down to 3 viable paths

/ PRELIMINARY

Opportunity identification	Opportunity assessment	Supporting rationale
Creation of short-list	1 Identified ~10 opportunities <i>Identified ~10 possible strategic options across audience & orchestration, media activation & measurement that pointed to possible gaps/ opportunity in the retail media ecosystem where NIQ could play</i>	4 Retail Media market is \$50B ad spend in US today, with strong growth; \$8-10B is the third party “tooling” market that supports audience, planning and measurement 5 Based on the initial mapping of market architecture including jobs to be done and vended landscape of the retail media space gaps were highlighted 6 Early VOC indicated key pain points for retailers and CPGs primarily across audiences and measurement
	2 Narrowed to ~3 opportunities <i>Opportunities focused in on audience and measurement given POV on VoC pain points, WTP, and early answer on NIQ’s right to win</i>	7 From a market perspective, initial sizing indicated significant spend in audience and activation with limited point solution spend in measurement. However, activation tooling is well vended with little opportunity to offer incremental value 8 VoC from retailers and advertisers were most dissatisfied with audience and measurement processes, with limited pain points in adtech tooling (e.g., DSP / SSP, clean room) 9 Evaluation of NIQ’s right to win showed up strongest in audience and measurement but was very limited in more adtech tooling focused opp. (e.g., DSP / SSP, clean room, data marketplace) ruling out majority of media activation opportunities and more adtech heavy opportunities in audience
Determination of viable paths	3 Further assessed 3 viable paths from short-list options <i>Deeper dive into size of opp., value to retailers/ CPs and NIQ parenting advantage identified a stronger value prop and parenting advantage for audience enrichment and measurement, but other options (e.g., retail media planning) offer possible entry point into RM ecosystem with faster TTV</i>	10 Largest opp. with near-term value is RM planning with potential to scale acquisition to ~\$200M; measurement opp. has longer TTV with ~\$100M opp.; audience opp. likely subscale (<\$50M) 11 Retail media planning tools (e.g., Skai) are perceived well by advertisers and retailers, but they primarily function as aggregators with limited measurement capabilities and access to 1P data so while they could serve as NIQ entry into RM, there is more limited synergy value in NIQ ownership 12 Across 4 paths, NIQ has strongest parenting advantage in measurement and audience enrichment opportunities due to ability to leverage existing data assets and capabilities in RM context, however there are limitation given lack of 1:1 identifiable transaction data 13 Actionability is mixed; although retail media planning has handful of possible targets, audience and measurement are likely build opportunities with measurement in particular a longer-term bet
Next steps	Deeper diligence required on possible targets & assessment of implication for broader NIQ strategy	

Assessment criteria

/ PRELIMINARY

Assessment criteria	
Capture the opportunity <i>Identify where to play</i>	☐ Size of opp.: There is a large pool of dollars being spent within target segment and attractive tailwinds that will support future growth ☐ Profit/ margin capture: Amount of dollars at stake is meaningful enough relative to value chain ☐ Market dynamics: There is limited risk of near-term disruption ☐ Competitive intensity: Competition is low enough for a solution to compete & gain share
Create value in the ecosystem <i>Link solutions to specific identified pain points or value accretive opportunities</i>	☐ Value-add: Tool/ solution addresses a current unserved/underserved need for retailers and/or CPGs ☐ Criticality: Use case addressed/ tool is critical to target segment value chain ☐ Willingness to pay: There is willingness to pay from retailers & CPG for the solutions
Deliver unique advantage <i>Determine differential assets and capabilities</i>	☐ Parenting advantage: NIQ has the assets or capabilities to deliver compelling solution or there are product/ delivery synergies with existing business ☐ Right to win: NIQ has a right to win in the segment ☐ Stickiness with retailers/ CPGs: NIQ can leverage to enhance retailer relationships or drive stickiness with CPG clients
Near-term actionability <i>Understand timing, approach to execution</i>	☐ Time to value: Opportunity adds value in the near to medium term ☐ Available targets: There are attractive targets in the market ☐ Build/ buy/ partner: There are companies or in-house capabilities that will allow NIQ to execute the opp.

① Opportunity landscape | Across audience and orchestration, media activation, and measurement & reporting, there are ~10 strategic opportunities

SECTOR SCAN SUMMARY

/ PRELIMINARY

Overview

Audience and orchestration	Creation of 1P audiences	a) Create 1P data to augment retailer's existing audiences; Offer platform to co-mingle audiences to support offsite ad inventory; Extension of Activate platform / Nexus b) Offer tool to enable retailers to create customized audiences within necessary timelines to enhance value of 1P data for advertisers
	Enrichment of audiences	Inclusion of demos, psychographics & consumer behaviors with existing RMN data for retailers
	Audience data marketplace	Combine 1P audiences with enriched audience data and make available to retailers to sell to advertisers
	Clean room & ID resolution	Offer enhanced clean rooms that allow for ID resolution and can incorporate the full scope of retail media data and provide measurement of ROAS, incrementality for inclusion in broader MMM on the backend of campaigns
Media activation	Retail media planning & optimization tool	Offer platform for advertisers to manage their retail media planning & optimize across different RMNs (e.g., Skai)
	Retail media DSP	Offer platform for advertisers to purchase their retail media
	SSP	Retailer ad inventory supply platform which connects with ad exchanges and DSPs to enable advertisers to purchase ads from RMNs
	Campaign optimization	Optimize current manual optimizations (e.g., specifying specific inventory types, audiences and allocating spend) for complex campaigns that require manual input currently
Measurement & reporting	Measurement of RMNs (e.g., cross-channel, onsite, offsite)	a) Cross RMN retail media measurement platform: Create single source of truth for measuring ROAS, attribution & incrementality across RMNs; provides RMNs measurement for sales outside own site/ own store
		b) Onsite incrementality testing: Standardized incrementality testing platform for retailers to prove onsite incrementality and for advertisers to compare incrementality across retailers / campaigns
		c) Offsite measurement: Develop capability for offsite measurement (e.g., incrementality) for retailers to track the full extent of their campaign
Connecting infrastructure	Retail media ads OMS	An order management system purposefully built for RMNs that tracks ad inventory across channels, integrates with DSPs / SSPs, and connects downstream with billing infrastructure

② Opportunity assessment – short list | We prioritized ~3 of the most compelling strategic options to further investigate

SECTOR SCAN SUMMARY

/ PRELIMINARY

Market overview

Assessing value and NIQ unique advantage has led to...

Audience & orchestration	- Audience is an attractive portion of the retail media tooling segment (~45% of total spend) with a relatively high portion of that concentrated in audience enrichment and audiences the most critical component of retail media, with retailers continuing to be interested in ways to build more compelling, rich audiences and CPGs desire to access these audiences through precise targeting Market is well vended by large incumbents (LiveRamp, TransUnion, Epsilon, etc.) with some functionality built in-house by scale players but opp. to offer incremental audience enrichment with additional data	Prioritized the following options: ①a Creation of 1P audience (A): - Clear pain point among mid-scale retailers - Indications of willingness to pay from both retailers & CPGs - Buyers perceive right to win from NIQ given strong reputation as a data provider ①b Enrichment of audiences - Gap in mid-scale retailer audiences (less rich audience data compared to scale players) and indication of willingness to pay - NIQ brand reputation strong	Deprioritized the following options: Creation of 1P audience (B) - NIQ has limited parenting advantage and right to win in this opportunity. Mid-market retailers are likely to gravitate towards building out in-house solutions Audience data marketplace: - No clear need from retailers or CPG; strong preference from retailers to sell directly and CPG satisfied with marketplace availability today - Unclear parenting advantage and limited perception of NIQ right to win Clean room & ID resolution: - Competitive market with significant technology capability required + lack of NIQ capabilities to provide scale of data required to build ID graphs for resolution - Scale players prefer in-house or satisfied with vendor (Liveramp)
Media activation	- Media activation represents ~50% of tooling spend; well covered by large incumbent ad tech players - Segments of market evolving and less critical to overall RMNs tooling ecosystem (e.g., retail media planning and optimization tool, SSPs)	② Retail media planning & optimization tool: - Solves clear need for retailers (increase reach and drives revenue) and CPGs (supports streamlining mgmt. of multiple RMNs) - Retailers & CPGs indicate possible right to win from NIQ given existing partnership with Skai and possible parenting advantage related to measurement/ shopper insights	DSP: - No incremental willingness to pay; highly sticky solution covered by several large incumbents and satisfaction from retailers with existing tooling/ vendor landscape - Lack of perception of strong NIQ right to win and need for best-of-breed technology solution limits NIQ parenting advantage SSP: - Smaller, market opportunity; declining tool usage as functionality is absorbed by other tools in value chain (e.g., ad exchanges) - Satisfaction from retailers with existing tooling/ vendor landscape and lack of perception of strong NIQ right to win Campaign optimization: - No willingness to pay from retailers & CPG; expected AI disruption that will automate internal process
Measurement	Measurement a clear tension point in retail media value chain today with CPGs asking for great standardization and visibility while retailers are opposed to adopting other standards of measurement outside in-house approach Limited spend on measurement point solutions, only ~\$60-80M today with majority of offerings from sub-scale players	③ Measurement solutions Cross-channel platform/ Onsite incrementality: - Clear pain point for CPG with desire for standardized methodology, better transparency and data sharing from channel partners to enable more accurate measurement; linked to high willingness to pay for solution that can solve these issues - Desire for a trusted, reputable measurement providers gives NIQ clear right to win while core competency in measurement likely to bestow parenting advantage	Offsite incrementality: - Limited offsite is done today especially for mid-market retailers; offsite is not part of a core growth strategy for mid-market retailers due to nascency of the market
Connecting infrastructure	Limited market segment today covering back-end processes; highly fragmented and currently vended by several non-retail media specialized vendors		Retail media ad OMS: - Despite link to clear pain point for retailers and willingness to pay from mid-market retailers; limited spend on existing tooling today and further possibility of AI disruption - No indication of believe in NIQ right to win for NIQ with retailers looking for deep expertise in RM tech stack

4 Retail media market size - US | Amazon remains largest RMN, but market is increasingly diversifying as it continues to grow

/ PRELIMINARY

Amazon is still the biggest network though others are growing faster

Note: (*) '19-'24 CAGR due to lack of '18 data; forecasts only available until 2027; "Retail Media Spend" is defined as all \$s from advertisers (incl. through agencies or DSPs) that flow into RMNs
Source: eMarketer

Commentary on evolution

- Amazon **built the category early** and still powers most of its growth, holding >75% market share primarily via its strength in **sponsored search**
- Amazon has also **added scaled supply / diversified offerings** via Prime Video, Fire TV and a mature DSP/self-serve stack
- Among the challengers, **Walmart Connect is the fastest growing** as it layers a Trade Desk-powered DSP, self-serve display and a Vizio-driven CTV ecosystem
- Target Roundel and Kroger Precision Marketing have also **grown and pushed deeper into offsite and programmatic partnerships** to extend reach beyond onsite
- Despite this, rapid share gains vs. Amazon have not materialized as RM spend follows scale and performance – brands **sell a lot on Amazon** and it still has the most **advanced capabilities** (e.g., query-level clean-room analytics in Amazon Marketing Cloud)

4 Retail media – tools & ad spend | Retail media tooling comprise ~\$8-10B of ~\$50B retail media market, majority of spend concentrated in audiences and activation

/ DIRECTIONAL / PRELIMINARY

Description			
	Retail media spend (\$50B reported by eMarketer) is all dollars that advertisers pay to RMNs for RM campaigns – both direct and programmatic (e.g., via RMN selected DSPs) Total shown here also includes tooling spend from advertisers (~\$1B estimated) that does not go through RMNs (calculated from CPG non-working media spend on tools) Total does not include agency fees or creative fees	Ad spend defined as dollars spent with retailers directly on media inventory and value of retailer 1P audiences; includes inventory value for offsite media (i.e., value passed onto offsite publishers for campaigns using retailer audiences) Tool spend defined as dollars spent on tooling / solutions to support RM campaigns – includes both spend directly related to media placement (e.g., DSP take rate per impression), and spend by retailers to support RMN functioning (e.g., platform fees for audience building, clean rooms, measurement)	Audience & orchestration incl. dollars captured by 3P audience solution providers (both tooling and data providers), does not incl. CDPs or value inherent to retailer 1P audiences Media activation includes dollars involved in the programmatic buying & selling of inventory, incl. optimization tools Measurement & reporting includes dollars paid to RM specific point solutions Connecting infra. includes dollars paid to tools that help build out front-end of RMNs (e.g., self-service portal) and ad OMS
Source(s) informing analysis	- eMarketer - Moffett-Nathanson	Industry participant interviews	- Industry participant interviews - Company websites / company financial filings - Lit. search

Note: Criteo revenue split across media activation and OMS based on 10-K report, 80% of revenue is performance media (media activation) and 20% of revenue is retail media (OMS)
Sources: eMarketer, Industry Participant Interviews, Moffett-Nathanson

5 Market Architecture (Retailers) | Top retailers have built mostly in-house to complete jobs although some 3P involvement, mid-scale mostly 3P

SECTOR SCAN SUMMARY

Gap in market / strategic opportunity Indicates optional functionality / PRELIMINARY

5 Market Architecture (CPGs) | Advertisers leverage mostly point solutions to accomplish jobs across value chain with some key gaps in functionality

SECTOR SCAN SUMMARY

Gap in market / strategic opportunity

Indicates optional functionality

PRELIMINARY

Demand side (CPGs)

6 VOC- Pain Points | Pain points today primarily concentrated in audience and measurement

SECTOR SCAN SUMMARY

/ PRELIMINARY

Most common pain point Least common pain point	Platform scale and advanced retailers	Mid-scale retailers	Advertisers / CPGs
	<u>Audiences, Creation of representative audiences:</u> Target and Kroger mentioned inability to get to a high match rate, which greatly limits the ability to truly measure campaign performance and to build fully representative audiences	<u>Measurement, Incrementality:</u> Mid-scale retailers often lack the resources (e.g., data scientists) or have limited onsite inventory due to size which makes calculating incrementality difficult due to inability to create clear groups of exposed vs. unexposed consumers	<u>Measurement, Inconsistent across RMNs:</u> Inconsistent ROAS calculations across RMNs and difficulty determining exact attribution across campaigns leave advertisers frustrated and skeptical of campaign performance
	<u>Measurement, Incrementality:</u> While majority of platform scale retailers have robust teams of data scientists and engineers to calculate incrementality, it remains challenging to calculate due to high complexity (e.g., ensuring contamination of samples doesn't occur for Walmart, balancing different advertisers' perspectives and needs for Amazon)	<u>Audiences, Enrichment:</u> Mid-scale retailers are just starting to utilize credit card data to enrich their 1P data but often have limited capabilities and resources to explore other enrichment offerings; advertisers often want more enriched audiences for better targeting	<u>Measurement, Incrementality:</u> Incrementality is a crucial metric for advertisers to inform them of true campaign performance and to compare across retailers; however, many retailers are unable to report incrementality or are untransparent about how incrementality is reported leaving advertisers frustrated
	<u>Audiences, Closing in on small capability gaps:</u> Scale retailers struggle with specific audience capabilities (e.g., standardizing audience creation across campaigns for Target, expanding enrichment capabilities beyond key word searches for Amazon)	<u>Audiences, Creation of customized 1P audiences:</u> Mid-scale retailers struggle to create customized audiences quickly due to limited team size and in-house capabilities (e.g., it can take 2-3 weeks to create customized audience)	<u>Activation, Managing multiple RMNs:</u> Agencies (utilized by large retailers) and mid-scale advertisers are overwhelmed by the number of different RMNs to manage, each with different qualifications and platforms; making it difficult to streamline campaign management

Source: Market participant interviews

7 Retail Media Tooling TAM | \$8-10B today with expected growth to ~\$12-14B in 5 years; Measurement relatively unvended as point solution but could expand

APPENDIX

Used simplifying assumption for market growth rate (~8%), assuming consistent growth across segments.
Realistically, certain tool segments could be growing faster than others.

/ DIRECTIONAL / PRELIMINARY

Assuming growth rate of ~8% for N5Y across segments, measurement remains a small part of overall RM tooling market

RM measurement: Current point solution growth

Retail media tool market (\$B, est. 2029) ✕ Est. incremental growth '24-'29

Accounting for additional growth drivers like incremental CPG spend, captures share of unvended market, measurement can reach ~\$500-700M

RM measurement: Current point solution growth + expansion of vended market

Retail media tool market (\$B, est. 2029) ✕ Est. incremental growth '24-'29

Note: Tooling market growth rate assumed same across segments -- ~8% based on eMarketer projections for overall retail media (~15% '24-'29) and recent performance of public tooling companies across segments (ranges from -2% to 12%)
Source: eMarketer, CapIQ, Company Financial Reporting, Bain Analysis

8 VOC - Measurement | Platform scale and mid-market retailers' measurement gaps focus primarily on incrementality but have mixed WTP & share data (1/3)

PLANNING

/ PRELIMINARY

	Measurement use cases/ needs	Pain points / gaps today	Criticality of gaps	Willingness to pay	Willingness to open up 1P data to 3P
Platform scale and advanced retailers					
	Onsite / Offsite / Capabilities: Full data scientist team in-house with full measurement suite	Onsite: Finding a true measurement for incrementality (e.g., proper exposure data, deduplication, etc.) is challenging		<i>Low – Strong market position allows for lower focus on perfecting measurement tools</i>	<i>Low – “WMT is staunch on no 3P vendors within their walls”</i>
	Onsite / Offsite / Cross Channel Capabilities: Full measurement team dedicated to custom measurements; Many ML models help automate measurement	Offsite: Difficulty measuring 3P attribution (e.g., Pinterest / AMZ ad ranking differed which led to inflated reporting on the AMZ side) Onsite: Incrementality is difficult to calculate due to varying perspectives and brand needs		<i>Low – Strong market position allows for lower focus on perfecting measurement tools</i>	<i>Low – “We don’t share our tracking performance data with anyone else, it’s very proprietary”</i>
 	Onsite / Offsite / Cross Channel Capabilities: Full in-house team handling campaign measurement utilizing internal tools	Onsite: Customizing look back windows by product type to determine campaign effectiveness (e.g., a look back window for a tv purchase is longer than a bag of chips)		<i>Low – Locks in predetermined vendor spend with JBP; Does not highly value strong measurement capabilities but may as competition increases</i>	<i>Low – Protective of 1P data</i>
 	Onsite / Offsite / Cross Channel Capabilities: Full in-house team handling campaign measurement utilizing internal tools and Circana partnership	Onsite: Focused on building out real time lift analysis for advertisers (e.g., decreasing lag time after a campaign to see results)		<i>Low - Tighter budget and focused on pushing high margins (e.g., previous measurement supplementals were rejected due to costs)</i>	<i>Low – Difficult to integrate new 3P vendors to all the necessary data pipes</i>

Source: Market participant interviews

8 VOC - Measurement | Platform scale and mid-market retailers' measurement gaps focus primarily on incrementality but have mixed WTP & share data (2/3)

MEASUREMENT

/ PRELIMINARY

	Measurement use cases/ needs	Pain points / gaps today	Criticality of gaps	Willingness to pay	Willingness to open up 1P data to 3P
Mid-market retailers					
	Onsite / Offsite / Cross Channel Capabilities: In-house data team conducts incrementality studies and tracks ROAS; rely on channel partners for offsite data (partner with Pinterest)	Onsite: Calculating incrementality is very difficult due to limited onsite inventory and inability to create a true hold out group Offsite: Channel partners (e.g., Meta) are reluctant to share 1P impression data, making it difficult to determine actual campaign performance (e.g., ROAS)		Med-Low – Current solutions are sufficient (e.g., In-house, Pinterest); May change if can capture more spend from advertisers in the future	Low – “All of our value is in our 1P data, we won’t allow anyone else to have it”
	Onsite / Offsite / Cross Channel Capabilities: Currently has small in-house team, working on building out more in-depth analytics (e.g., more robust onsite incrementality)	Onsite: Keeping up to date Meijer SKU taxonomy negatively impacts ROAS; incrementality is difficult due to difficulty determining exposed vs. unexposed users		Med-Low – RMN is in early stages and building out in-house capabilities; may be more open to allowing consultant/ 3P if solution was custom built for them	Low – Wants to limit number of 3P vendors to simplify their RMN
	Onsite / Offsite capabilities: Relying on a mix of 3P and in-house capabilities to measure campaign performance	Cross Channel: Difficulty identifying unique users across channels to calculate campaign performance (e.g., ROAS, incrementality, attribution); standardizing reporting across channels was also challenging		Med-Low – Very focused on building out in-house capabilities	Medium – Fairly early on in RMN journey, may be open to highly promising vendors
	Onsite / Offsite capabilities: In-house team primarily works on capturing all campaign performance metrics; limited cross channel capabilities	Onsite: Difficulty calculating closed loop attribution across in-store and online channels Onsite: Lack of standardization of how to calculate incrementality		Medium - Primarily focused on building out in-house team capabilities; but has leveraged consultants in the past and is willing to pay for outside help	Med-Low – In-house team has limitations that need to be improved, but would prefer to bring help in-house (e.g., consultants)
	Onsite / Offsite / Cross Channel: In-house team calculates all campaign performance metrics	Onsite: Difficulty calculating attribution / incrementality due to complexity of granular level data; trouble with getting SKU level measurements Offsite: Difficulty calculating incrementality; Manual process today to launch offsite campaigns		Med-High – In-house measurement capabilities are not as strong and is looking to make them more robust	Medium – Hesitant to share 1P data, but know that they may need additional help as they continue to grow
	Onsite / Offsite / Cross Channel capabilities: Outsourced all measurement capabilities to InMar	Onsite: Long lag time to receive measurement reports from InMar (~1-2 weeks); Small sample size makes it difficult to have high confidence in results Offsite: Limited confidence in InMar’s tracking abilities for offsite		Medium – Currently dissatisfied with InMar experience, would likely pay slightly more for a better experience	Med-High – Currently outsourcing all measurement capabilities and would switch vendors due to unsatisfactory experience

BAIN & COMPANY

8 VOC - Measurement | Advertisers have a high WTP due to large scope across different RMNs each with different measuring needs

/ PRELIMINARY

MEASUREMENT

/ PRELIMINARY

Advertisers	Measurement use cases/ needs	Pain points / gaps today	Criticality of gaps	Willingness to pay	Willingness to open up 1P data to 3P
<u>Global strategics</u>   	RMN: Heavily leverage agencies and RMN account managers to report back campaign performance MMM: Sophisticated MMM and internal team enable in-house compilation of ROAS, leveraging 3P data from partners (e.g., Circana) Incrementality: Leverage data clean rooms and in-house teams for additional incrementality testing	Attribution, incrementality, and ROAS: Attribution windows and incrementality / ROAS methodologies are inconsistent across RMNs Onsite attribution: In-store sales are difficult to attribute to online campaigns and require higher ID match rate and deeper loyalty/ID data collection		<i>High – Willing to pay additional to be able to action RMN insights to build better campaigns and spend more effectively</i>	N/A – RMN own data, but advertisers willing to share their data
<u>National leaders</u>    	RMN: Use retailer-provided dashboards (Amazon, Walmart), especially in self-serve campaigns Aggregation: Leverage platforms like Pacvue to consolidate performance cross RMNs	ROAS, incrementality: ROAS / incrementality methodology across vendors is not transparent and hard to compare across RMNs Impressions: Channel partners (e.g., Meta) are reluctant to share impression data and clean rooms are not intuitive		<i>High – Willing to spend on solutions that save manual measurement hours</i>	N/A – RMN owns data, but advertisers willing to share their POV
<u>Personal care / non-food brands</u>   	Vendors: Hire data partners (e.g., Analytic Partners) to run an MMM every 4-5 mos. For campaign-level ROI; Receive ROAS reports from RMN every few weeks Incrementality: Incrementality is measured by internal team through clean rooms used during audience and orchestration	ROAS: RMN's ROAS reports and MMMs are at the campaign level but lack ROI by campaign aspects (e.g., inventory type, placement) Process: RMN reports take weeks, and MMM months, making it hard to optimize campaigns real-time Incrementality: Retailers rarely report incrementality, and when it's reported its not consistent across RMNs		<i>Med-High – Willing to invest in campaign optimization with clear ROI due to higher price sensitivity</i>	N/A – RMN owns data, but advertisers willing to share their POV
<u>Small / emerging brands</u>   	RMN: Retailers provide performance metrics; Advertisers lack internal capabilities to validate or test ROI in-house MMM: Leverage proxy metric like add-to-cart or category share reports from data partners (e.g., Circana)	ROAS: Many times, retailers will share the final calculation but not the methodology or the data behind ROI; advertisers must blindly trust retailers Process: Relies on agency and third-party vendors to consolidate and share campaign performance results; due to small scale are not always prioritized		<i>Low – More cost sensitive; unlikely to adopt solutions outside of existing partnerships</i>	N/A – RMN owns data, but advertisers willing to share their POV

8 Delivery mechanism | Retailers prefer measurement solutions embedded in their RMN; Advertisers have varying preferences on delivery mechanism

MEASUREMENT

/ PRELIMINARY

	Retailer		Advertiser	
	Preference	Commentary	Preference	Commentary
Point solution	✗	<i>"I'm a little skeptical that a new point solution vendor could come in and really understand all the pieces and nuances that are needed for measurement. It would be difficult and hard to do well."</i> Retail Media Strategic Partner, Retailer #4	✓	<i>"I think an independent 3P vendor completely separate from the RMN is best poised to deliver unbiased measurement solutions. Currently, the retailers are just grading their own homework."</i> Director Shopper Marketing, Coupon CoE, CPG #16
Embedded in RMN	✓	<i>"I definitely prefer to do all my measurement capabilities in-house, even if I have to rebuild my team. If that's not an option, then I'd hire an external consultant to help us build what we need in-house before going to a 3P vendor."</i> Product Manager, Retailer #10	✓	<i>"I really think that measurement should be included in whatever the retailer is offering. I'm paying the ad campaign; I shouldn't have to pay additional for measurement."</i> Marketing & Transformation Executive, CPG #13
Embedded in other adtech	✓	<i>"We were only okay with Criteo helping us with our self-serve measurement analytics since they had the data already. Everything else we preferred to do in-house."</i> Head of Retail Media Sales, Retailer #10	✓	<i>"I would like to see additional measurements (e.g., iROAS) from Skai. I like using their unified view to compare across all my campaigns and it would be easier if additional measurements were integrated there."</i> Retail Media Campaign Manager, Tech Partner #9
Embedded in broader measurement solutions	✓	<i>"It took a lot for us to open up to a 3P analytics company. There's a lot of trust required, we vetted them very thoroughly before we onboarded them. It was a lot of work to onboard them, so any new measurement solutions we add I'd prefer it to come from my existing provider."</i> Strategy & Insights Executive, Retailer #12	✓	<i>"It would be helpful for a cross RMN measurement (e.g., incrementality) to be incorporated and aligned with our MMM model. Otherwise, we would only be able to use the numbers directionally."</i> Director, Retail Commerce, CPG #2

Source: Market participant interviews

8 Measurement opportunity | Limited interest from retailers could change as offsite and non-endemic continue to grow, putting pressure on need for objective measure

/ PRELIMINARY

Retail media is ~13% of US ad spend and is mostly delivered onsite; most dollars still flow to search

Commentary

- **Offsite has grown at 43% CAGR** vs. 25% for onsite ('20-'24) – brands increasingly want access to offsite since it **expands reach without losing targeted precision**
- **Display spend growing faster than search** (23% CAGR vs. 20% '20-'24) as it **extends influence on customers earlier in their journey** for more incremental opportunities
- **Non-endemic** retail media spend is small, but **demand is rising** as retailers help businesses beyond their supplier base access potentially relevant audiences
 - Offsite tends to be more attractive to non-endemic (onsite traffic more limited), so traction with non-endemic would require retailers developing more sophisticated offsite infrastructure / partnerships

Note: "Retail Media Spend" is defined as all \$s from advertisers (incl. through agencies or DSPs) that flow into RMNs
Source: Moffett-Nathanson, eMarketer, S&P, Bain analysis

9 NIQ “right to win” | Retailers and CPG perceive NIQ has the highest right to win in measurement opportunities, but limited capabilities in media activation (1/2)

SECTOR SCAN SUMMARY

Legend

/ PRELIMINARY

	Strategic Option	NIQ right to win	What Retailers think	What Advertisers think
Audience and orchestration	1 Creation of 1P audiences (A)	High	For small/mid-scale RMNs not monetizing 1P data, NIQ is a reputable data aggregator, some RMNs might still be cautious to give up control of 1P data <i>“Eventually the smaller and more niche RMNs will need to find a way to generate passive revenue. They just don’t have the resources that a Kroger or Target does.”</i> Senior Manager, Commercial Ops., Retailer #6	N/A
	Creation of 1P audiences (B)	Low	NIQ has no brand reputation in the ad tech space, not core competency <i>“Custom audiences can take 2–4 weeks; we often use pre-built segments just to hit timelines.”</i> Head of Retail Media Marketing, Retailer #3	Value validated custom audiences from trusted 3Ps to launch campaigns with more confidence <i>“We often have to make up audiences. A tool to validate and deliver them faster would be very valuable.”</i> Director, Retail Commerce, CPG #2
	2 Enrichment of audiences	High	NIQ’s positioning as trusted data vendor & taxonomy familiarity enables better enhancement process (e.g., higher match rates) <i>“Everyone’s looking for a better audience. If we could enrich with psychographics or behaviors through data platforms (e.g., NIQ), that would be viable.”</i> Retail Media Strategic Partner, Retailer #4	NIQ’s data capabilities position it as a viable partner for advertisers <i>“This is what we’re starved for: enrichment would save us money and give us more ROI.”</i> Director of Sales, Energy, CPG #7
	Audience data marketplace	Medium/low	NIQ lacks necessary tooling and not positioned as marketplace retailer <i>“Huge, ground-shaking opportunity... but data aggregation is tough without also being a clean room provider.”</i> Retail Media Strategic Partner, Retailer #4	NIQ could aggregate data & simplify access; skeptical of ability to entice retailer cooperation <i>“If you could simplify planning across RMNs for brand managers, that would be a big deal.”</i> VP of eCommerce & Digital, CPG #6
	Clean room	Low	Clean rooms are critical, need a trusted and compliant vendor with expertise in DCR <i>“Clean rooms are critical... we already have a trusted provider.”</i> Revenue Operations Executive, Retailer #5	N/A
Media activation	3 Retail media planning & optimization tool	Medium/low	Partnership with Skai lends limited measurement credibility; retailers pass back pre-calculated metrics <i>“As a retailer, we appreciate aggregators like Skai / Pacvue because they enable larger reach of advertisers. We enable them to have API access, but we only pass back pre-calculated campaign metrics, they don’t have access to our 1P data.”</i> Head of Product, Retailer #1	Partnership with Skai lends limited credibility; advertisers are skeptical of aggregators’ actual measurement capabilities; NIQ could add contextual data to bolster measurements <i>“CPGs want cross-RMN planning tools to simplify retailer data fragmentation...it’s difficult to measure consistently or plan across networks.”</i> Senior Manager, Commercial Ops., Retailer #6
	Retail Media DSP	Low	NIQ lacks AdTech or bidding infrastructure; best positioned as measurement add-on to DSP <i>“Bidding is already done through a 3P – we rely on them for onsite and offsite”</i> Sales Director, Retailer #11	N/A

9 NIQ “right to win” | Retailers and CPG perceive NIQ has the highest right to win in measurement opportunities, but limited capabilities in media activation (2/2)

SECTOR SCAN SUMMARY

Legend

/ PRELIMINARY

	Strategic Option	NIQ right to win	What Retailers think	What Advertisers think
Media activation	SSP		Low demand; NIQ has no publisher relationships or ad exchange infrastructure to monetize inventory <i>“SSPs create margin leakage; we’d prefer private marketplaces instead” Ad Products and Audience Executive, Retailer #9</i>	N/A – no exposure to tool/ capability
	Campaign optimization		See this as an additional capability with an existing 3P vendor for execution & bidding <i>“Optimization is manual and resource-heavy today; we need automation, not a black box” Ad Products and Audience Executive, Retailer #9</i>	N/A – no exposure to tool/ capability
Connecting infrastructure	Retail media ads OMS		Ideal vendor would have deep expertise with the retail media tech stack and have strong workflow and billing capabilities <i>“We need OMS tools with invoicing and SKU capabilities built for media” Head of Retail Media Marketing, Retailer #3</i>	N/A – no exposure to tool/ capability
Measurement & reporting	4a Cross RMN retail media measurement platform (Halo)		Need standardized measurements across fragmented RMNs with NIQ as trusted 3P <i>“CPGs became very interested in Interactive Advertising Bureau (IAB) standards. They demanded it as price of entry — need a standard everyone agrees on or they won’t work with you.” Senior Director, Retailer #11</i>	Would prefer a neutral party (NIQ) to provide standardized measurement data across channels and across RMN campaigns <i>“The problem [with measurement] is accountability. Retail media is held to a higher standard than other channels. We need consistency in how it’s measured so we know what we’re actually paying for.” Director, Retail Commerce, CPG #2</i>
	4b Onsite incrementality testing		NIQ is seen as trusted measurement expert; but limited access to closed loop data (e.g., requires access to 1P data increasing data needed which NIQ is not known for) <i>“We couldn’t find a good 3P solution and had to build holdout tests ourselves” Senior Director, Retailer #11</i>	Would prefer a neutral party (NIQ) to provide standardized measurement data to compare across other RMN campaigns <i>“Incrementality is what we care about, not just clicks or ROAS. If there were a standardized way to test onsite incrementality across RMNs, that would be a huge unlock.” SVP & USA Head, Sales & Strategy, CPG #14</i>
	Offsite measurement		NIQ has limited brand presence and influence with key 3P channel partners; but limited access to 1P retailer data <i>“97% of IDs we could track, but the other 3% broke at point of sale. It’s hard once you go offsite. A trusted third party would make that more credible.” Director of Sales, Head of Agency, Retailer #7</i>	Prefer a neutral party (NIQ) to provide standardized measurement data across RMN campaigns <i>“We’d prefer a neutral 3P to standardize measurements across RMN campaigns; otherwise, every retailer grades their own homework.” VP of eCommerce and Digital, CPG #6</i>

11 NIQ parenting advantage | NIQ assets and capabilities give NIQ more of a

12 parenting advantage in measurement

SECTOR SCAN SUMMARY

Legend

/ PRELIMINARY

	Strategic Option	NIQ parenting advantage	Rationale
Audience and orchestration	1 Creation of 1P audiences (A)	Medium	- NIQ aggregates large-scale shopper signals (RMS, Homescan/Omnishopper, Digital Purchases) and already operates platforms (Activate, Consumer Canvas) that assemble and distribute audiences; GeoPurchase data is granular (1:1 matching) but lacks individual retailer tagging - However, NIQ lacks person-level privacy-safe ID resolution capabilities which would be required for cross-retailer (<i>TransUnion has this capability but NIQ's current partnership does not involve these capabilities</i>) - NIQ has limited existing connections to activation channels except for The Trade Desk
	2 Enrichment of audiences	Medium/high	- NIQ & MRI-Simmons (psychographic) data is already used to produce / enhance probabilistic or modeled audiences in other media activation; data is not tied to 1:1 identifiable retailer data or highest value for retailers / advertisers; however, it is possible that these existing capabilities could be leveraged in a RMN audience enrichment capacity - NIQ will still need to solve technical challenges (e.g., ID resolution match rates, clean rooms) for enrichment of 1P data
Media activation	3 Retail media planning & optimization tool	Medium/low	NIQ does not have strong adtech technology capabilities today; there is limited incremental value NIQ data would provide to retail media planning tools beyond what they receive today
Measurement & reporting	4a Cross RMN retail media measurement platform (Halo)	Medium/high	- NIQ can leverage category POS data, standardized product taxonomy, and wide breadth of contextual data (e.g., seasonality, historical data) to standardize incrementality / ROAS calculations - However, NIQ would need to gain access to several retailers' exposure logs and 1:1 identifiable transaction data to truly standardize across RMNs which may be difficult
	4b Onsite incrementality testing	Medium/high	- NIQ can bolster and triangulate existing calculations with contextual data and product taxonomy from POS / panel - NIQ would need to get retailer cooperation to gain access to exposure logs and transaction data user IDs to calculate incrementality

Source: Market participant interviews

10 Actionability | Retail media planning tool provides fastest path to \$100M, measurement may reach ~\$100M but long road, audiences more limited in potential

SECTOR SCAN SUMMARY

/ PRELIMINARY

	1	2	3	4
	Creation of 1P audiences	Enrichment of 1P audiences	Retail media planning & optimization tool	Cross-RMN measurements / Onsite incrementality
Current TAM		\$3-4B (Total audience & orchestration)	\$4-5B (Total media activation)	\$60-80M (Total measurement & reporting)
Future TAM		\$5-6B (Total audience & orchestration)	\$6-7B (Total media activation)	\$500-\$1B+ (Total measurement & reporting)
NIQ market opp.	Entry and position would be smaller (e.g., ~\$20M) without clear path to >\$100M given market structure) w/ limited growth profile based on current traction (i.e., Rippl by Bridg) compared to larger ad tech players who serve scale retailers	While market is large, growing position would be difficult (<\$50M) given fragmentation of and competition faced between large scale enrichment partners and smaller enrichment providers that provide similar function	Potential to grow to \$100M+ business with acquisition of player with established scale (e.g., Skai)	Potential long-term path to \$100M+ business assuming market need develops and willingness to pay for point solution
Rationale	- Total size of tooling for display ad audiences ~\$700-\$900M – much of the value lies in enrichment vs. pure audience creation and is captured by large ad tech players (e.g., LiveRamp) - Closest analog to creation of 1P audiences for mid-scale retailer opportunity is Bridg solution (~\$20M), but real value of opportunity likely <\$20M due to Bridg offering some non-RM solutions (e.g., for QSR) - There is limited indication that mid-scale retailers will be rapidly growing audience spend in near future	- Total size of audience enrichment partners ~\$800M-\$1B (dwarfed by value captured by retailers) - Market is crowded –traditional data players like TransUnion, Experian, Acxiom capture majority of market, and long tail of hundreds of providers (e.g., Vizio, Cars.com) share the rest - With time, RMN spending will be driven more by non-endemic, offsite, and display – helpful tailwinds to the segment; however, likely difficult for NIQ business to rival established players at first given current footing	- Total size of retail media planning segment ~\$200-300M, with Skai & Pacvue as the two biggest players - As retail media grows & advertisers seek to reduce access points and consolidate planning workflows, retail media planning tool segment likely has promising growth profile - Established retail media planning tools (e.g., Skai) have robust technical foundations and established retailer relationships to enable scaling to \$200M+ (~double current size)	- Current point solution segment size small at ~\$60-\$80M, but CPG advertisers indicate further ~\$25-\$85M runway could be available for a solution from a trusted partner (like NIQ) that addresses current pain points - NIQ can also capture portion of RMN in-house / embedded solution spend (~\$300-400M value '29) if solution solves retailer pain points No current point solution can be bought as a “short cut” to truly scaled measurement solution - For NIQ to build solution, would need retailer cooperation (e.g., exposure logs and transaction data w/ user IDs)

Source: Bain experience; Lit. search; Market participant interviews

12 Convincing retailers to share data | Advertisers hold the power to drive opening of retailer 1P data in the near term by shifting dollars

SECTOR SCAN SUMMARY

What needs to happen in the near term

Growth in offsite / non-endemic is an opportunity but still far out for many retailers given nascency of their RMNs

How	Description	Retailer commentary
Decrease in spend from advertisers	As the RMN market matures, advertisers will test / observe their YoY growth with retailers and pull spend from those who are underperforming	<i>"Measurement is critical to know how advertisers are spending the money. If they don't see or understand the performance of a campaign, they'll start moving to other retailers."</i> Merchandising SVP, Retailer #18
Comparing campaigns to other RMNs	If a brand runs a campaign across multiple RMNs and receives drastically different measurements (e.g., ROAS), the retailers will receive pushback and questions from advertisers on measurement methodology	<i>"One time we ran a campaign with a brand that ran the same campaign across other RMNs. We had a very different ROAS compared to the other RMNs which raised a lot of pushback and questions from the advertiser on our methodology. That really pushed us to adopted IAB standards right away and to get certified."</i> Head of Product, Retailer #1
Market dynamics shift	Large scale RMNs and advertisers hold a lot of power in the RMN space. If they demand measurement standardization others will follow	<i>"I think if there was a precedent set by the largest advertisers that demanded measurement standardization, we'll see the needle shift and retailers will start to get on board. Similarly, if a few of the largest retailers decided to work together and adopt a standardization I think that could move the market too. But the tough part is that the big players aren't super motivated about having to incur the cost of standardized measurement, I think it could absolutely happen but it's definitely a future shift, we're awhile away."</i> Retail Media Strategic Partner, Retailer #4
Increase in measuring RMN performance in MMM	Advertisers are beginning to incorporate RMN spend and performance in MMM studies. They threaten to pull spend if retailers don't participate	<i>"The bigger brands have really started to take RMN measurement into their own hands. They are incorporating RMN campaigns into MMM and requiring retailer participation in those studies. Advertisers threaten to greatly decrease spend or pull spend completely for RMNs who don't comply."</i> Senior Manager, Commercial Operations, Retailer #6
IAB standardization	IAB could create more technical and specific frameworks around measurement. Increasing number of advertisers / agencies choosing to only work with IAB certified retailers could lead to more standardization adoption	<i>"IAB needs to set out structured guidelines of how exactly retailers should identify and connect the data. They need to set what thresholds to use and what would create more validity in a measurement. Nowadays there's an increasing number of agencies and brands that won't work with retailers who aren't IAB certified."</i> Director of Sales, Head of Agency, Retailer #7 <i>Today retailers are really apprehensive of giving any type of control to a brand advertiser, retailers really don't want advertisers influencing how measurement should be done. I think we're a long way out (~5+ years) from any type of standardization. Brands would really have to push for IAB standards and be firm on it."</i> Senior Manager, Commercial Operations, Retailer #6

Key Terms & Glossary | Retail Media Market & Advertising Basics

APPENDIX

■ Key segmentation terms

/ PRELIMINARY

	Term / item	Description
Advertisers	Endemic advertisers	Advertisers who sell products or services through the retailer
	Non-endemic advertisers	Advertisers who do not sell products / services through the retailer
	3P marketplace advertisers	Brands that list on retailer e-commerce marketplaces (e.g., Amazon Marketplace), do not sell inventory to retailer through merch. teams, and use retail media to advertise
Inventory location	Onsite ads	Advertising that appears on a retailer's own website or app
	Offsite ads	Advertising using retailer data / infra. that appears on external websites or platforms, such as social media, search engines (e.g., on Facebook, Google)
	In-store ads	Advertising that appears within a retailer's physical locations, such as on digital screens, checkout kiosks
Inventory type	Ad inventory	Number and types of ad placements available for purchase by advertisers on a publisher's website / digital platforms
	Search	Includes paid search onsite (retailer website / app), as well as when retail media networks are leveraged for offsite paid search buys (e.g., Google search)
	Display	All other visual ads, both onsite and offsite, that use retailer data for targeting (includes video, banners, CTV, social, DOOH, etc.)
Sources of value	Audiences	Groups of shoppers targeted for ads, built solely from retailer data (e.g., loyalty cards, purchase history, browsing) or built on a foundation of retailer data
	Insights	Actionable learnings from analyzing shopper and campaign data (e.g., which ads drove sales, which segments convert best)
	First-party data (1P)	Data collected directly from a retailer's own website or customer database
	Second-party data (2P)	Data collected by a partner or affiliate with whom the retailer has a direct relationship
	Third-party data (3P)	Data collected by an external data provider, which can include data from various sources such as social media, search engines, and other retail websites
	Reach	The total number of people or potential customers who are exposed to a particular advertising message or campaign
Purchasing model	Programmatic	Any automated method of buying and selling digital ad inventory using software, instead of manual negotiations; includes open auctions, private marketplaces, real-time bidding, and other automations; includes programmatic direct
	Direct	Advertising inventory bought and sold manually through 1-1 negotiations between advertiser and publisher, without using programmatic technology or automated auctions
	Open exchange	Includes public real-time bidding (RTB) auctions open to all buyers and sellers; also called an "open auction" or "open marketplace"
	Private marketplace (PMP)	An auction owned by a single publisher or a small group of publishers and open only to a select number of invited buyers to bid on ad inventory; also called a "private exchange," "private auction," or "closed auction"
	Programmatic direct	Publishers and advertisers negotiate terms and prices for a direct deal (inventory is not auctioned), but ads are transacted & delivered via programmatic platforms
	Real-time bidding (RTB)	Automated process in digital advertising where ad impressions are bought and sold through instant auctions, happening in milliseconds as a user loads a webpage
Source: Market participant interviews Bain experience		

Key Terms & Glossary | Programmatic Buying & Enabling Technology

APPENDIX

■ Key segmentation terms

/ PRELIMINARY

	Term / item	Description
Enabling technology	Audience & orchestration	Tools that support building, segmenting, and managing audiences using retailer and partner data and tools that support orchestration & successful delivery of campaigns (e.g., managing creative content, serving ads)
	Media activation	Tools that support campaign management and optimization both on supply and demand side (e.g., DSP, SSP)
	Measurement & reporting	Tools that support tracking, analyzing, and reporting campaign performance, including attribution and incrementality
	Data clean room (DCR)	Secure digital environments where multiple parties can commingle their first-party data to produce audience and campaign insights (e.g., LiveRamp's Safe Haven, InfoSum's Secure Data Clean Room, and Snowflake Data Cloud) – has data onboarding, ID resolution capabilities
	Data management platform (DMP)	Platforms that collect and house relevant first-, second-, and third-party data inputs, generating insights that can inform real-time programmatic decision-making and overarching optimization strategies (e.g., Audience Manager DIL extension in Adobe Experience Cloud)
	Demand-side platform (DSP)	Platforms through which advertisers can purchase programmatic inventory from multiple ad exchanges, ad networks, and SSPs via a single interface (e.g., The Trade Desk, Yahoo DSP, Amazon DSP, and Google DV360)
	Supply-side platform (SSP)	Platforms through which publishers access advertiser demand from multiple ad exchanges, ad networks, and DSPs via a single interface (e.g., Magnite, PubMatic, OpenX)
	Ad server	Tools used to deliver ad creative to users' browsers, can also track and analyze the results of campaigns (e.g., Google Ad Manager)
	Ad Order management system (OMS)	Platforms retailers leverage to support booking, managing, and tracking ad campaigns, orders, inventory across channels; integrates with SSPs, exchanges, DSPs to coordinate multiple sources of business; connects downstream with billing infrastructure
	Ad exchanges	Aggregators of inventory supply from the sell side and demand from the buy side to facilitate real-time transactions (e.g., InMobi, PubMatic, and Google's AdX)
Other	Customer data platform (CDP)	Platforms that collect and house an advertiser's or publisher's first-party data about their own customers to create a single, holistic view of each customer over time
	Third-party cookies	Small files placed on a user's device by an external company / website; used to track online behavior and preferences. Cookie deprecation refers to phasing out use in online ads due to privacy and data protection concerns
	Digital publishers	Entities that create and distribute content, such as articles, videos or ads
	Go-to-market (GTM)	Strategy for bringing a product or service to market; incl. product development, pricing, distribution, and promotion

Source: Market participant interviews; Bain experience

Retail media overview | Retail media involves media controlled or brokered by retailers through interactions with advertisers on tech-enabled marketplaces

RETAIL MEDIA 101

/ PRELIMINARY

Marketplace effectively coordinates supply and demand, efficiently allowing retailers to monetize their assets and brands to target desired audiences, heightening value to both sides

Source: Market participant interviews, Bain experience

Inventory location | Retail media inventory can be located on retailer property (onsite, in-store) or on the broader web (offsite)

RETAIL MEDIA 101

/ PRELIMINARY

← Offline → ← Online →

 In store	 Onsite	 Offsite
Ads appearing in physical stores (e.g., digital check-out kiosk banner spaces) Does not include traditional shopper marketing / trade spend	Ads appearing on a retailer's own digital properties (e.g., app, website, etc.)	Ads appearing on other digital properties , using the retailer's data for targeting and/or their off-site ad inventory

Drive sales

- Improve visibility at point-of-sale to aid customer decision making and directly lead to sales
- Expand audience reach
- Support full-funnel marketing

Drive incremental reach

- Influence purchasing decisions at critical moment of digital buying journey (e.g., on e-commerce website)
- Enhance brand visibility on digital shelf
- Drive measurable ROI, directly optimizing campaigns for better performance

- Target precise purchase-based segments
- Expand audience reach
- Support full-funnel marketing

Source: Lit. search; Bain experience

Type of advertisers | Retail media is primarily endemic advertisers but non-endemic growing as non-endemic advertisers seek audience targeting from RMNs

RETAIL MEDIA 101

/ PRELIMINARY

Endemic vs. non-endemic advertisers

Endemic

★ **Need:** RMNs for targeting accuracy and ability to convert at point-of-purchase

Non-endemic

★ **Need:** Access to unique audiences & premium ad formats to drive awareness

Source: Lit. search, Bain experience

With endemic spend and onsite inventory plateauing, RMNs must attract non-endemics through access to unique audiences

- Tapping into non-endemic advertisers allow RMNs to **grow** beyond endemic budgets, **smooth seasonality** with diverse categories, **sustain pricing** by increasing competition, and **further monetize audiences & insights**
- Non-endemic advertisers work with RMNs to tap into **proprietary data** to target and activate **commerce-anchored, logged-in audiences at scale** and across platforms
- RMNs must provide **non-product-based audience products** with easy activation and integration, **standardized measurement** metrics beyond sales attribution (e.g., brand lift, lead quality), and **make buying simple** for brands without pre-existing relationship with retailer

Walmart

- **Opened ads to a selection of non-endemic brands** in April '24
- Brand categories include automotive, entertainment, financial services, quick-service restaurants, and travel

Albertsons

- **Launched non-endemic ads onsite** in June '24
- Non-endemic ads will only appear post-checkout

- Began piloting **non-endemic ads as part of their RM rebrand** in March '24
- Initial testing with brands in financial services, insurance, automotive, and telecom

Audiences | Retailers use 1P and 3P data to produce valuable audiences for advertisers

RETAIL MEDIA 101

/ PRELIMINARY

Increasingly advanced audience-building methods...

These are methods, not mutually exclusive audience types: retailers layer Enrich & Predict on 1P seed audiences to create different buyable audience options

	Seed	Enrich	Predict
Description	- Collect retailer 1P deterministic data and create rule-based cohorts from loyalty IDs, point-of-sale (POS) and onsite/app events Activate onsite or export unchanged for use in other platforms	Make seed cohorts portable and more precise by resolving retailer IDs to 3P IDs in a clean room and appending approved third-party attributes (e.g., demographics, web/app behaviors)	Score customers using ML and AI to estimate propensities, create lookalikes, recommend next-best product - Train models on closed-loop outcomes that link exposure to online and in-store sales and refresh on a cadence as new results arrive
Example audience types (non-exhaustive)	- Category or brand buyers, new-to-category prospects and lapsed buyers Promo-responsive shoppers, pick-up heavy shoppers High-intent shoppers (e.g., from searches or product views within short window)	- Category or brand buyers / prospects with demographic or lifestyle overlays - CRM-seeded cohorts matched to retailer IDs and extended with web or app behaviors	High propensity (try or repurchase) buyers or high churn risk buyers Demographic / behavioral lookalikes of high-value households / individuals
Key building blocks for retailers	- High-coverage loyalty and POS data tied to persistent customer or household IDs with consent and governance - Customer Data Platform (CDP) for segmentation and audience updates plus baseline closed-loop reporting to sales	Clean-room agreements and identity resolution / ID graphs to map retailer IDs to attributes Availability of 3P data such as demographics, web or app signals, CTV viewership or card-spend, with match-rate quality checks and ability to connect data to IDs	Labeled training data that joins impression and click logs to sales outcomes and experiment designs to read incrementality - ML capabilities (e.g., models, Ops) to score and refresh audiences with connectors that pass results back from DSPs and RMN ad servers
Advertiser value prop	- Efficiently reach known buyers / likely prospects close to the point of purchase with closed-loop proof of sales impact - Achieve waste-reducing suppression (e.g., not targeting recent purchasers)	- Add reach and precision across onsite and offsite channels while keeping retailer proof of performance - Enable creative and bid strategies tailored to life stage, context or geography for better relevance	- Find net-new demand and prioritize spend by predicted lift to improve incremental ROAS Learn faster over time as sales outcomes feed the models and targeting and bidding adapt accordingly

Source: Lit. search; Bain experience

Tools & capabilities | Retail media “jobs” are accomplished through a complex ecosystem of tooling & capabilities; some built in-house, some vended today

RETAIL MEDIA 101

▨ Tool declining in relevance

◀ Indicates optional functionality

/ PRELIMINARY

Note: (*) APIs set the rules for how different software should communicate, connectors execute rules to move data from one system to another

Measurement dimensions | Measurement for RM can be provided in a number of different ways each requiring different capabilities, relationships & data access

RETAIL MEDIA 101

/ PRELIMINARY

Measurement Dimensions

Channel	RMN involvement	Metric	Data sources	GTM offering
Onsite <i>Placement within the retailer's own platforms</i>	Single RMN <i>Closed ecosystem within one RMN (e.g., only Target, Kroger, etc.)</i>	ROAS <i>Return on add spend</i>	Retailer 1P data <i>POS transaction logs, loyalty data</i>	Point solution <i>Standalone measurement platform</i>
Offsite <i>Placement in 3P channels leveraging the retailer's 1P data</i>		iROAS <i>Incremental return on add spend</i>	Ad server (e.g., GAM) <i>Impression logs for onsite banners, sponsored products and search ads</i>	Embedded in RMN <i>Delivered through RMN as part of their offering (e.g., Walmart Luminate)</i>
Cross Channel <i>(Onsite + offsite)</i>	Multiple RMNs <i>Ecosystem with multiple RMNs (e.g., Target and Kroger and Amazon)</i>	Attribution <i>Connection of campaign touchpoints with conversion</i>	DSPs (e.g., The Trade Desk) <i>Impression logs for offsite campaigns from 3P platforms</i>	Embedded in ad tech <i>Integrated solution within DSP, ad server or buying platform</i>
		Incrementality <i>Sales lift for exposed vs. control audiences</i>	Channel partners <i>Aggregated tables and metadata from 3P platforms (e.g., Meta)</i>	Embedded in broader measurement tools <i>MMM, analytic tools, etc.</i>

Source: Market participant interviews

Activation | Similar tools leveraged in offsite as onsite; key difference is necessity of DSP, ID resolution for secure targeting in 3P publishing platform

CAPTURE THE OPP.

/ ILLUSTRATIVE

Offsite activation

Note: Logos in each box are examples, may have additional capabilities (e.g., OpenX is also a DSP) | Source: Market participant interviews; Bain experience

8 VOC – Audience | Top-tier retailers have robust in-house capabilities, mid-scale and specialty have varying pain points (1 of 3)

AUDIENCE

/ PRELIMINARY

	Audience & Orchestration needs / use cases	Pain points / gaps today	Criticality of gaps	Willingness to pay	Willingness to open up 1P data to 3P
Platform scale and advanced retailers					
	Create: All audience data available on Scintilla (pay additional fee) for advertisers; Created in-house with loyalty data Enrich: Utilizes 3P vendors (e.g., credit card transactions) to enrich data	Create: Although higher than most RMNs, has some difficulty getting 100% match rate; gaps have been increasing due to Apple customer protections (e.g., Allows customers to opt-out of tracking)		<i>Low – Robust in-house capabilities; Strong market position and reach allows them to fully rely on in-house</i>	<i>Low – “Walmart would never send our 1P data to a 3P vendor. There’s so many risks and regulations, especially as a publicly traded company.”</i>
	Create: Strong in-house capabilities that quickly build robust and customizable audiences with rich 1P data Enrich: Audiences enriched by large volume of AMZ interaction data (e.g., keywords, clicks) and other AMZ sites (e.g., Twitch, prime video)	Enrich: AMZ’s current audiences are reliant on keyword models, can not contextualize well, limiting ad effectiveness and ability for enrichment (e.g., for advanced conversational buying with AI tools)		<i>Low – In house capabilities; Strong market position and reach allows for lower focus on audience & orchestration</i>	<i>Low – “We’re really not interested at all at sharing our 1P data anywhere else than in-house. We absolutely need to have control of our own data.”</i>
	Create: Outsourced campaign execution to Target India partners, which limits functionality of audience creation (e.g., custom audiences) Enrich: Utilizes 3P data vendors (e.g., location providers, credit card data) to enrich data	Create: Low ID match rate, limiting power of audience reach in campaigns Create: Inconsistent audience strategy (e.g., P&G has 10 campaigns, each with a new audience vs. using 1 audience) Enrich: Tried several 3P vendors, but had difficulty justifying additive value		<i>Low – In house capabilities; Hyper focused on maintaining high margins</i>	<i>Low – “There definitely is a lot of sensitivity around sharing 1P data.”</i>
	Create: Strong in-house capabilities for audience creation Enrich: Limited data enrichment (e.g., leveraged some DSP capabilities for look alike audiences)	Create: Low ID data match rate, limiting power of audience reach in campaigns Create: Tried to monetize Kroger loyalty data for other RMNs, but unsuccessful due to complicated ID resolution Enrich: Advertisers wanted enrichment for audiences but had difficulty justifying ROI (e.g., enrichment just cut into margins)		<i>Med– Has 3P vendors, but current pain points are not critical enough to pay more</i>	<i>Low – “Our legal team absolutely hated the idea of letting 3P vendors in, even in a clean room setting an agency could easily compare what % a match their data set was to ours which was a huge risk.”</i>

8 VOC - Audience | Top-tier retailers have robust in-house capabilities, mid-market and specialty have varying pain points (2/3)

AUDIENCE

/ PRELIMINARY

	Audience & Orchestration needs / use cases	Pain points / gaps today	Criticality of gaps	Willingness to pay	Willingness to open up 1P data to 3P
Mid-market retailers			Hyper focus on onsite activation limited willingness to pay for offsite related capabilities today		
	Create: Uses Meta for look alike audiences offsite; limited onsite audience building capabilities Enrich: In-house team will layer in buyer behavior and interest overlays from Circana	Create: For specific campaigns, creating custom audiences is expensive and timely (e.g., finding Beyer's buyers over L3M)		Med-Low – Content with current solutions; may change in future for audience enrichment as RMN matures	Med-Low – Very protective of 1P data, only willing to open up to necessary vendors
	Create: Utilized in-house team to create audiences Enrich: Limited 3P enrichment due to nascency of RMN; Utilized existing Meijer data lake and partners like Cardlytics (credit card signals) to enrich data	Create: Had low match rate with 3P data to build audiences due to smaller presence and trouble activating		Med-Low – Hyper focused on keeping margins high; May change if able to capture more advertiser spend	Low – Wants to limit number of 3P vendors to simplify their RMN
	Create: In-house analytics team builds audiences Enrich: Utilize Epsilon to strengthen data sets with appended attributes	Create: Difficulty creating scale audiences due to smaller scale		Med-Low – Building out in-house capabilities for onsite; may be interested in future	Med-Low – Actively trying to take capabilities in-house
	Create: Utilizes in-house team, leveraging robust loyalty program Enrich: Does not currently enrich audiences for onsite but recently partnered with Rippl for offsite audiences	Create: Cleaning data in-house in preparation for audience creation is resource intensive due to clunky legacy systems		Medium – Current user of Rippl; willing to bring 3P partners in strategically to supplement in-house capabilities	Med-Low – Prefers to bring help in-house via consultants if necessary; protective of 1P data
	Create: Mostly done by in-house teams Enrich: Utilizes NIQ (competitive pricing, location-based purchasing) and Liveramp to enrich data	Create: In-house creation is not as accurate (over targeting, mistargeting) Enrich: Merging 1P data with purchased data is manual and costly; limited by governance laws		Med-High – Internal resources are mostly spent on creation; see high ROI in 3P enrichment solution	Medium – Open to 3P vendors for a high-quality solution
	Create: Leverages in-house team and InMar capabilities to create audiences Enrich: Utilizes Experian to enrich with additional 3P data (demographic/household)	Create: Customers change (e.g., new address) which makes it difficult to create targetable audiences Enrich: Long time (~30-45 days) to get data back from Experian due to smaller size		Medium – Would be willing to pay for a solution that provides faster audience creation	Medium – Main goal is to help advertisers, would be willing to open up to a solution that alleviated pain points

8 VOC value in measurement through retail planning | Advertisers & agencies value Skai / Pacvue's aggregation abilities, but see little potential for measurement

PLANNING

/ PRELIMINARY

Usage of retail media planning tool today		Criticality of tool	Interest in measurement through tool	Willingness to pay incrementally
Platform scale and advanced retailers				
amazon ads Walmart Connect Kroger ROUNDEL	Partners: Allow Pacvue and Skai API access to their RMNs to enable larger reach of advertisers	N/A	N/A	N/A
Mid-scale retailers				
Criteo CitrusAd	Partners: Criteo and CitrusAd enables Pacvue / Skai RMN integration for the long tail of retailers (e.g., Meijer, CVS, etc.)	N/A	N/A	N/A
Advertisers / Agencies				
Colgate	Skai / Pacvue user: Leverages Skai and Pacvue for campaign planning, inventory allocation, and data aggregation across RMNs	●	Med-Low – Skai/Pacvue don't have any additional access to retailer 1P data; would be potentially interested in additional measurement in the future	Med-Low – Potentially, but skeptical of tool's ability to access retailer 1P data
KraftHeinz	Skai / Pacvue user: Leverages Skai and Pacvue for activation, campaign planning, and measurement	●	Low – Skeptical that Skai could bring additional metrics beyond what they get from RMNs	Low – Conservative with spend on data
ESTÉE LAUDER COMPANIES	Skai user: Utilizes Skai for media buying, optimization, reporting, and analytics	●	Low – Don't see incremental measurement value from Skai/Pacvue beyond aggregation	Medium – If Skai was able to help fill in holes in their reporting (e.g., incrementality) would be interested, but solution would be evaluated thoroughly
Campbell's	Pacvue user: Pacvue used more for post-buy, to consolidate reporting (e.g., CPM, share of voice, traffic) and serve as a "unified source of truth"	●	Low – More confident in brand's ability to collect additional measurements in-house compared to Pacvue	Low – Prefer to invest in in-house measurement capabilities
BROWN-FORMAN	Skai / Pacvue user: Media optimization, activation, and aggregated reporting; Pacvue used more often through agencies	●	Low – Skeptical of Skai / Pacvue's ability to collect any additional metrics beyond what they report today	Med-Low – Depends on the information they'd offer; prefer to invest in data for audience enrichment than measurement
PUBLICIS MEDIA	Skai user: Skai primarily used for aggregated dashboard across RMNs, automated bidding rules, and competitive insights	●	Low – Skai's measurement shows nothing beyond what RMNs provide; not trusted measurement provider	Med-Low – Skeptical of Skai's ability to calculate incrementality accurately
dentsu	Skai / Pacvue user: Leverages Skai for campaign management, optimization, bid management, and reporting; used Pacvue similarly, but consider it to be more client-friendly	●	Med-Low – Skai doesn't have additional data points beyond RMNs today; would be potentially interested if offerings were available in the future	Low – Advertiser would have to take on additional cost, not the agency
OmnicomGroup	Skai / Pacvue user: Skai and Pacvue used for optimization, and reporting; Pacvue used more with clients	●	Low – More confident in-house capabilities to collect additional measurements than what Skai or Pacvue can	Low – Prefer to invest in-house to save money and drive more efficiency

Audience competitors | Largest vendors include LiveRamp, Experian, Epsilon, TransUnion & Amperity and offer both tech & data assets

AUDIENCES

Spend breakdown

2024 Retail Media Audience & Orchestration (\$B)

Non-exhaustive; Circana has emerging offerings – being the data / audience backbone to Walgreens; smaller long tail of audience players & general data providers not included

Deep dive to follow / DIRECTIONAL / PRELIMINARY

Audience & Orchestration competitive landscape

Company / Product	Company Rev.	RM-specific rev. (directional est.)	Description	Key strengths	Level of RM specialization
Amazon marketing cloud	N/A – total AMZ rev less relevant	~\$2-3B	Provides DCR, ID resolution, data marketplace, and leverages Amazon proprietary 1P data	High quality audiences based on vast AMZ 1P data	High – Native to Amazon Ads
Snowflake	\$2.6B	~\$260M	Provides DCR & marketplace; integrates w/ partners for ID resolution	High customization, flexibility	Low – General cloud / data services
LiveRamp	\$750M	~\$150-200M	Provides ID resolution, DCR, and marketplace; limited proprietary data (enrichment is w/ 3P marketplace data)	Mature DCR offering with large retail media presence	Medium-low – Horizontal DCR / audience solutions, majority of customers are advertising on open web vs. RMN
Experian Mosaic	\$600M – “marketing solutions”	~\$100-150M	Provides ID resolution, marketplace, and has proprietary data; requires integrations with partner DCRs	Covers ~98% of US households	Medium-low – Experian marketing solutions also serve broader open web ads
Epsilon Audience & Insights	\$540M	~\$100-150M	Provides CDP, ID resolution, DCR, and has large proprietary consumer datasets; not a marketplace	Integrated RM stack via CitrusAd; Publicis company	Medium-low – Epsilon’s broader ID / clean room products serves majority open web ads
TransUnion TruAudience (acq. Neustar)	\$1.2B – “emerging verticals”	~\$100-150M	Provides ID resolution, DCR, marketplace, and has proprietary data	Covers ~98% of US pop.; many activation paths	Low – Marketing-solutions is only a part of TU and RM is a small part of biz
Acxiom Audience Cloud	\$780M	~\$50-100M	Provides ID resolution, marketplace, and has data assets; requires integrations with partner DCRs	Covers ~98% of US pop.; many activation paths; IPG company	Low – Acxiom has many less relevant products like prospecting tool; within audience tools, RM is small use case
Amperity	\$90M	~\$10-50M	Has CDP, ID resolution; no DCR, marketplace, or proprietary data	Many activations path (e.g., TTD integration)	Medium – Also serves some non-RM verticals but RM is one focus
Merkle Merkury	\$60M	~\$10-50M	Provides ID resolution and has some proprietary data; no marketplace; integrates with partner DCRs	In the Dentsu network -- easy connection to other services	Medium-low – Merkle ID solutions also serve broader open web ads
Bridg (incl. Rippl RMN)	\$22M	~\$10-20M	Has ID resolution, Rippl marketplace aggregates small RMNs & provides proprietary data; uses partner DCRs	Innovative consortium-style platform is first of its kind	High – Highly focused on retail media, solution spans audience & measurement Deep dive on p93
InfoSum	Unknown	Unknown	Clean room only w/ partner ID resolution solutions	Satisfies niche security / compliance needs	Medium – RM is a leading use case, but DCR is horizontal
Embedded feature in other solutions (e.g., Criteo, The Trade Desk) – not sized / not sold separately			Embedded in RMN suites / DSPs enabled by partners (e.g., LiveRamp)	Connectivity upstream and downstream	Varies – Some RM specific solutions and others general

Spend breakdown

2024 RM-relevant DSP, SSP, Bid Mgmt. Tooling Spend (\$B)

Source: Company websites, Financial Filings, Helix Find, Market Participant Interviews

Media activation competitive landscape

	Company / Product	Company Rev.	RM-specific rev. (estimated)	Description	Key strengths	Level of RM specialization
Spec. RM platforms	Specialized RM platforms (Criteo, Epsilon RM / CitrusAd, Kevel, Koddi, Moloco, AdButler, Topsort, Pentaleap)	\$3.2B	~\$2-3B	Platforms include built-in activation functionality (i.e., powers programmatic purchasing for onsite and open web for RMNs)	Integration with full RM stack	High – RM-only specialized suites
	Amazon DSP	~\$200-500M	~\$300-500M	DSP for Amazon audiences across on/off Amazon.com	High quality 1P audiences, strong measurement	High – tailored DSP for Amazon
	Google DV360	~\$800-850M	~\$200-300M	DSP for open web display & video buying + YouTube (walled garden)	Scale, tight Google ecosystem integration, YouTube access	Low – generalist DSP
	The TradeDesk	\$2.4B	~\$200-300M	Independent DSP for open web omnichannel buying	Scale, retail partnerships, CTV reach	Medium – growing retail partnerships
	Other DSPs (Yahoo, Inmobi, Viant, Amobee, MediaMath, Quantcast, Bidtellect, Vistar, Beeswax) – small part of RM market, not sized			Niche players, most with a focus on spec. type of inventory	Lower fees, access to niche inventory (e.g., DOOH)	Low – generalist DSPs
DSPs	Magnite	\$225M	~\$100-120M	Largest open web SSP players in retail media, with attached ad exchange to manage RTB auctions and connect with DSPs natively	Flexible integration	Med – supports publisher advertisement
	PubMatic	\$115M	~\$50-75MM		Scale, header bidding/SPO strength	Med – supports publisher advertisement
	OpenX	\$60M	~\$1-5M		Strong ID graph partnerships	Med – supports publisher advertisement
	Others (Xandr, IndexExchange, Sovrn, Equativ, Teads)			Long tail of SSPs that are less specialized in retail media	Access to different buyers	Low – generalist Ad Tech
	Pacvue	~\$80-100M	~\$80-100M	Specialized cross-RMN buying/activation platform; integrates with top retailers	Strong budget mgmt. capabilities	High – built for RM
SSPs	Skai	~\$60-70M	~\$60-70M		Deep RMN integrations & cross-channel activation	High – built for RM
	Quartile	~\$15-20M	~\$15-20M	AI-powered campaign optimization (incl. bidding, pacing etc.) w/ strong focus on Amazon	Automation & strong cross-retailer analytics	High – built for RM
	Perpetua	~\$15-20M	~\$15-20M		Deep ad format coverage, & creative optimization	High – built for RM
	Intentwise	~\$10M	~\$10M		AI-assisted optimization	High – built for RM
	Small retail media planning (i.e., Trellis) and players who's secondary focus is on retail media planning (i.e., MarinOne)					

RM- specialized point solution | Limited set of RM specific measurement point solutions exist today

Market for RM specialized pt. solutions

2024 RM specific measurement & reporting spend (\$M)

RM specialized measurement point solutions competitive landscape

	Company / Product	Company rev.	RM-specific rev. (estimated)	Description	Key strengths	Level of RM specialization
RM specific point solutions	Circana	\$300-350M (Circana Media only)	\$40-60M	Offers lift, incrementality, MMM, "rest of market" sales for advertisers	Broader measurement offering beyond RM	Low —majority of business is broader media measurement
	Upwave	\$14M	~\$5-10M	Measures lift, reach, and optimization across various channels	Offers unified dashboard to reduce reconciliation work	Medium – Dedicated RM suite within their wide cross-channel portfolio
	Measured	\$12M	~\$5-10M	Leverages experiments to calculate lift, attribution, MMM, and incrementality	Depth in causal testing and operational scale plus 300+ integration	Medium-High – Serves advertisers less relevant to RM, but offers incrementality testing specific to Amazon
	OptiMine	\$9M	~\$1-5M	Omnichannel MMM, attribution, and budget optimization	Offers RM specific solutions, real-time MMM and budget optimization	Medium – Equally fit to measure for RMN and general marketing insights (e.g., Insight for conversion, Inspire for incremental lift)
	Incremental	\$2M	~\$1-2M	Identifies the incremental value of users' creatives, campaigns	Retailers identify it as the leading measurement solution for retail media	High – Entire product position and business centered around RM

Targets - smaller audience players | Players with unique tech solutions that collect proprietary data are identified as potentially attractive targets (1/2)

AUDIENCES

Targets prioritized based on proprietary tech & data assets

Legend  Attractive target

/ PRELIMINARY

	Rev/ valuation	Description	Tech and tooling		Access to data		Current RM level of relevance
			Tech and tooling	Proprietary data	Retailer data	Data partnerships	
	~\$100M* / \$210M	Create probabilistic audiences from proprietary data and sells to advertisers	AI algorithm to assist filtering through survey, 3P, and campaign to pull together audiences	Probabilistic audiences build on surveys	N/A	3P demographics, locations, behavioral, purchase data from DSPs	Low — Primarily works with non-retail publishers
	~\$100M* / \$350M	Creates probabilistic audiences from owned 1P data and sells to advertisers	- Blueprints is their proprietary point of interest mapping that matches location signals to store polygons - Ads Manager platform cleans and enriches 1P and 3P data for probabilistic audiences shaped by behavior and demographics	Behavior, intent, and location 1P data via owned app (WeatherBug)	N/A	Enriched audience segments from DSPs (i.e., TTD)	Low — Building audiences for CTV, DOOH, and social campaigns
	~\$100M / \$450M	Helps advertisers customize audiences and segment by location, purchase behavior, interest, etc. on a self-service platform	- Owned consumer apps (i.e., City Guide, Swarm) track user location signals - SDKs across partner apps collect consumer behavior signals - Patented ML models connect proprietary data to 3P data from partners to create audiences for advertisers	Location, behavior, purchase, device ID, and intent data via SDKs and owned apps	N/A	Ready-to-use audience segments (i.e., Holiday shoppers, fast casual diners) via DSPs	Low —Main advertising channels are digital, social, CTV, and OOH
	~\$50M / N/A	Creates and enriches probabilistic audiences with their proprietary and 3P data	- Proprietary ML based algorithm builds probabilistic audiences based on motivations, values, and roles (i.e., family providers, affluent saves) - SDKs on 250 mobile apps tracking consumer behavior and location	- Behavior and location data tracked via owned SDKs 1P loyalty, behavior, interest/intent data via owned shopping apps (i.e., Out of Milk) - Drivers of choice (i.e., value, quality, brand, retailer, etc.) data based on ~4,000 respondent consumer surveys	N/A	- Aggregated credit card transactions, scanned receipts, and product scans from banks/cards - Probabilistic impression data purchased from DSPs	Low —Creates audiences for general channels, not RM specific
	~\$40M / N/A	Combines proprietary data with AI to create and enrich audiences	AI-enabled platform that automates data retrieval and processing (i.e., ID resolution, onboarding, enrichment, taxonomy mapping, privacy validation)	1P intent/interest data sets from the "ShareThis" widget, which maps engagement across 3M publishers	N/A	- Partnerships with Experian, ID5, LiveIntent, and Sovrn for HEMs and MAIDs - Customer provided data across 1.2T devices, 670M global MAIDs, and 430M global IP addresses	Low — Identified RM as a growth opportunity

Predactiv excluded from list of attractive targets given knowledge of financials

Note: (*) Revenue includes measurement and creative in addition to audience services

Source: Company websites, lit. search, market participant interviews, PitchBook

Targets - smaller audience players | Players with unique tech solutions that collect proprietary data are identified as potentially attractive targets (2/2)

AUDIENCES

Targets prioritized based on proprietary tech & data assets

Legend  Attractive target

/ PRELIMINARY

	Rev/ valuation	Description	Tech and tooling	Access to data			Current RM level of relevance
			Tech and tooling	Proprietary data	Retailer data	Data partnerships	
 Affinity Solutions	~\$33M / \$50M	Leverages AI modeling to generate probabilistic audiences based on previous transaction history	• Comet, Affinity Solutions' AI-powered data platform, partners with AWS clean room to support ID matching to build enrich audiences	N/A	N/A	- Consented consumer purchase dataset via partnerships with banks - Purchase data received from financial partners	Low —Outside in appears to not focus on RM
 Faraday	~\$30M / \$20M	Conducts ID resolution on consumer data using 3P data for probabilistic audiences	• AI-powered owned identity graph tool probabilistically attributes customers with demographics, interests, and intent	N/A	N/A	Attribute (i.e., property, demography, tiers), survey, non-cash transaction data from 3P vendors	Low —Outside in appears to not focus on RM
 GrowthLoop	~\$25M / N/A	Probabilistic audience segmentation and targeting based on 1P advertiser data	• AI algorithm focused on building audience segments based on demographics	N/A	N/A	N/A	Low —Focused on helping small businesses scale generally
 Permutive	~\$15M / \$380M	DCR and measurement platform that also sells 3P probabilistic audiences (from partners)	• DCR that securely fosters audience enrichment for advertisers, using advertiser 1P data and publisher data	N/A	N/A	Curated audiences from DSPs	Low —Primarily works with news publishers (i.e., Financial Times, BBC, Washington Post)
 optable	~\$10M / N/A	Helps advertisers resolve identities and enrich their audiences with proprietary data to build unified audience profiles across channels	- SDKs track customer behavior for ID resolution - ID Switchboard is a product that allows customers to experiment with different identifiers to optimize for the best fit audience	Aggregated identity signals (e.g., hashed emails / publisher IDs, visitation, location)	N/A	N/A	Low —Outside in appears to not focus on RM
 hightouch	~\$10M / \$1.2B	CDP that offers self-service tools for probabilistic audience building and ID resolution across 1P advertiser data and partnership data	- SDKs that advertisers can plant in on their platforms to support ID resolution against 3P data sources - Customer Studio is Hightouch's self-service platform that allows advertisers to customize audiences and tailor ID resolution	N/A	N/A	Purchase history, churn risk models, demographics, etc. from 3P partners (i.e., Snowflake)	Low —Primarily connects advertisers with non-RM platforms (i.e., Roku, Reddit, Pinterest, LinkedIn)
 birdzi	~\$7M / \$5M	Provides tools to enhance shopper profiles so that grocers can better target 1:1 offers / promotions to increase basket, trips, and loyalty across owned channels (site/app)	- Proprietary KIC score that calculates and assigns customer behaviors for better modeled segments - Offers retailer-branded mobile apps and services	N/A	1P transactional and loyalty data from grocer partners that use Birdzi's branded mobile apps and services; <i>no cross-retailer use of identifiable data</i>	N/A	Low —Currently only helps retailers run loyalty and coupon promotions
 REVEAL	~\$5M / \$25M	Matches foot traffic, location, and customer behavior data to 1P advertiser data create probabilistic audiences	• SDKs collect signal data to create device IDs that are mapped with client data	Location, behavior, purchase, and intent data via SDKs	N/A	N/A	Low —Primarily focused on advertising on social channels

Potential targets | Prioritized targets have broad cross-RMN and omnichannel planning coverage and are specialized in retail media planning (1/2)

RETAIL MEDIA PLANNING

Targets prioritized based on level of RMN coverage & degree of RM specialization

 Potentially attractive targets

/ PRELIMINARY

Platform	Revenue (directional estimate)	Coverage	Core Competency & Focus	Assets and Capabilities	Measurement and Reporting capabilities
 PACVUE	~\$80-100M	Cross-RMN (all major RMNs) + omnichannel	Retail media planning focused; now part of a broader commerce acceleration suite (e.g., digital shelf optimization / SKU strategy)	- Rule-based dayparting / pacing with some AI/ML-driven optimization - Commerce signals partnerships with NIQ / Profitero – ingest shelf signals into bidding	- Pulls ROAS, attribution and other KPIs (e.g., CPC, impressions) from RMNs - Provides web scrape data (e.g., pricing) & adds partner data (e.g., market data from NIQ) to enhance reporting
 skai	~\$60-70M	Cross-RMN (all major RMNs) + omnichannel	Retail media planning focused; omnichannel ad media solutions also robust	- Rule-based decisioning (e.g., on dayparting, pacing) with AI-driven decisioning - Commerce signals partnerships with NIQ / Profitero – ingest shelf signals into bidding	- Pulls ROAS, attribution and other KPIs from RMNs & normalizes some KPIs (e.g., clicks, impressions) - Provides web scrape data (e.g., pricing) & adds partner data (e.g., market data from NIQ) to enhance reporting - Partners with Incremental to model incrementality
 CommercelQ	~\$20-50M	Cross-RMN (all major RMNs) + omnichannel	Retail media planning is a primary pillar with a broader e-commerce optimization platform (e.g., POs, OOS reduction)	- ML-based Goal Optimizer reallocates bids/budgets using 50+ signals (inventory, SOV, competitor moves) - Commerce signals partnerships with NIQ – ingest shelf signals into bidding	- Pulls ROAS, attribution and other KPIs (e.g., CPC, impressions) from RMNs - Provides market data from e.fundamentals (acq. 2022) & partners (e.g., NIQ) to enhance reporting
Stackline	~\$20-50M	Cross-RMN (Amazon, Walmart, Target, Instacart + Criteo network of retailers) + omnichannel	Retail media planning is a secondary focus integrated into a broader retail intelligence suite (e.g., DaaS analytics, content, etc.)	Data-driven media planning & optimization suggestions based on attributed shopper outcomes data (separate Shopper OS transactions attribution asset) – <i>supports in-campaign optimization but for AMZ only</i>	- ROAS + basic KPIs pulled from RMNs - Multi-Retailer Attribution technology to better attribute media outcomes (<i>co-developed w/ AMZ, measures multi-retailer impact of AMZ ads only</i>)
 downstream by JungleScout	~\$20-50M (JungleScout)	Amazon focused (recent expansion to Walmart, focus on 3P marketplace sellers) + omnichannel	Retail media optimization is now a primary component of enterprise suite (Downstream originally an Amazon ads specialist) – <i>but small part of JungleScout total biz</i>	- Rule-based dayparting and ML-based ROI optimization – <i>tight integration and advanced functionality for AMC</i> - Leverages Jungle Scout market intelligence (SOV, competitor signals) to suggest bidding strategies	ROAS + basic KPIs pulled from RMNs

Pacvue excluded from list of attractive targets given current ownership

Potential targets | Prioritized targets have broad cross-RMN and omnichannel planning coverage and are specialized in retail media planning (2/2)

RETAIL MEDIA PLANNING

Targets prioritized based on level of RMN coverage & degree of RM specialization

/ PRELIMINARY

Platform	Revenue (directional estimate)	Coverage	Core Competency & Focus	Assets and Capabilities	Measurement and Reporting capabilities
 intentwise	~\$10-20M	Cross-RMN (Amazon, Walmart, Instacart + Criteo network of retailers)	Retail media planning focused; dedicated e-commerce advertising platform for marketplace and RMNs (e.g., also includes DSP integrations)	Mix of ML recommendations and rule-based controls across supported RMNs (<i>strongest in-campaign diagnostics and optimization for Amazon, more manual for other retailers</i>)	ROAS, SOV + basic KPIs pulled from RMNs
 perpetua	~\$10-20M	Cross-RMN (all major RMNs) + omnichannel	Retail media planning focused; purpose-built platform for marketplace & RMN ad automation and optimization	- Always-on, goal-based “set-it-and-forget-it” AI bidding, keyword harvesting, rank/SOV tracking - Ingests insights in near-live cadence to inform planning – <i>Amazon only</i>	- Pulls ROAS, attribution and other KPIs from RMNs & normalizes some KPIs (e.g., clicks, impressions) - Displays multi-touch attribution, category trends etc. via AMC integration
 Quartile	~\$10-20M	Cross-RMN (Amazon, Walmart, Instacart + Criteo network of retailers) + omnichannel	Retail media planning focused; AI-driven ad optimization platform for marketplaces & RMNs	- ML-based automation for media planning (dayparting, budgeting, pacing) - AMC-integration for audience design and optimization	- ROAS, SOV + basic KPIs Pulls from RMN reporting
 teikametrics	~\$10-20M	Amazon & Walmart only (focus on 3P marketplace sellers) + omnichannel	Retail media planning is one pillar of business (Amazon/Walmart ad optimization for sellers), with added focus on profitability measurement	- ML-based goal-driven hourly bidding - Integrates product-level sales & cost data (customer provided) - Ability to optimize audiences in-campaign – <i>Amazon only</i>	- ROAS + basic KPIs - Linkages from ad spend KPIs to cost data to calculate profitability Pulls from RMN reporting
 Marin SOFTWARE	~\$10-20M	Cross-RMN (all major RMNs) + omnichannel	Retail media planning is a secondary component (added to Marin’s cross-channel marketing optimization platform spanning search, social etc.)	- Rule-based automation and budget pacing - Advanced budget planning and pacing across publishers; bulk editing capabilities	- ROAS + basic KPIs Pulls from RMN reporting
 trellis	<\$10M	Amazon & Walmart only (focus on 3P marketplace sellers)	Retail media planning focused; AI-driven marketplace ad optimization platform	- ML-based automation for media planning (dayparting, budgeting, pacing) - Automatic budget reallocation features	- ROAS, SOV + basic KPIs Pulls from RMN reporting

Size of measurement | Measurement TAM could be \$500-700M accounting for growth of current vended market, with CPGs, and current un-vended spend

APPENDIX

Current vended point solutions (~\$100-150M)

'24-'29 RM specific measurement & reporting spend (\$M)

Current vended measurement point solutions total ~\$60-80M, assuming growth of ~8% (in-line with total tooling growth '24-'29), this portion of the market could reach ~\$100-150M by '29

Future CPG willingness to pay (~\$40-130M)

Thought exercise with CPG advertisers reveal that further ~\$40-130M could be captured in next 5 years if NIQ provides a solution that addresses current pain points
See next page

/ ILLUSTRATIVE / PRELIMINARY

Unvended RMN measurement spend (~\$300-400M)

~\$500-700M

Illustrative '29 RM measurement spend (incl. in-house, embedded) -- excluding AMZ

Market participants indicate that in-house resources / embedded solutions spend on measurement could be ~<2% of total RMN revenue; this would imply a total RM market measurement value (excl. Amazon) of ~\$300-400M in '29 (assuming ~15% market CAGR)

CPG measurement opportunity size | Thought exercise with CPG advertiser customers bounds potential willingness to spend to around ~\$40-\$130M by '29

APPENDIX

/DIRECTIONAL /PRELIMINARY

Tested the following hypothetical with CPG advertising decision makers to gauge the appetite & willingness to spend on measurement solution

One of your trusted data partner / vendor is offering the following: a **Retail Media** measurement tool that standardizes basic metrics (e.g., same ROAS calculation across RMNs), has accurate attribution, offers robust incrementality measurements for onsite and offsite (omnichannel).

Think about this as the tool that solves all your retail media measurement pain points (e.g., if a current pain point is delay in measurement reporting post-campaign, this tool offers real-time in-campaign measurement).

Note: (*) Covers all players with >\$100K US digital media spend data on Pathmatics; total potential spend calculated by taking each CPG players' digital spend and multiplying by %s | Source: Pathmatics; Market participant interviews

Audience opportunity size | Analogs suggest creation of 1P audiences & enrichment of audiences are both likely smaller opportunities for NIQ

APPENDIX

/ DIRECTIONAL / PRELIMINARY

Audience & Orchestration Tooling & Data Market (\$B, 2024)

Source: Market participant interviews; Company financial filings; Lit. search; Bain analysis

Audience opportunity size | Tooling & data opportunity for retail media audiences is much smaller compared to broader definitions of audience value

All digital media audiences

Retail media audiences (~\$10-12B)

Non-retail media audiences
(other digital media audiences)

Value of audiences for all campaigns running through retail media networks; includes both value to retailers themselves (**ad spend**) and value to 3P tooling & data partners (**tool spend**)

Value of audiences in campaigns **unrelated to retail media networks** (e.g., open web advertising using probabilistic modeled audiences or using 1P data collected by CPG advertisers, etc.)

3P tooling & data partners
(~\$3-4B)

Retailer 1P audience value
(~\$7-8B)

Value accruing to audience tooling & data partners, can be split in different ways, for example:

Search
Limited applicability for audiences

vs.

Display

Tooling

vs.

Data

Creation

vs.

Enrichment

Value accruing to retailers for the inherent value of their 1P audience data – included in **ad spend**

Opportunity assessed for this work a subset of this part of the broader audience market
